

DWA_07.4 Knowledge Check_DWA7

1. Which were the three best abstractions, and why?

- **createPreview function** : one function, one purpose to create a snippet of a book.
-

2. Which were the three worst abstractions, and why?

- **Data fragmentation**: the code has multiple sections that have similar structures and perform similar operations whereby they are duplicated which could lead to code redundancy and potential maintenance issues.
-

3. How can The three worst abstractions be improved via SOLID principles.

- **Data fragmentation**: by creating a centralized data model which allows for better organisation.
-
