

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

- **Encapsulating the book preview was easy because there wasn't much to change either then creating a function and calling it back.**

2. What parts of encapsulating your logic were hard?

- **I actually didn't get to that point of finding it hard however I can now see the difficulties when having to encapsulate more complex code.**

3. Is abstracting the book preview a good or bad idea? Why?

- **Good idea. Seeing that the code written for the *html* was duplicated in three areas, abstracting it became a solution for this redundancy.**
-
